# Blockchain Innovation Program Tutorial Framework

POWERED BY

## Blockchain Innovation Program Tutorial Framework

The Blockchain Innovation Program is a designed as an intensive 10-week programme which will provide students with educational and entrepreneurial support for them to develop a comprehensive understanding of what's involved in Bitcoin Application Development. The programme will see the students complete the three bitcoin primitive courses Hash Functions, Merkle Trees, and Digital Signatures before they complete the newly refactored Introduction to Bitcoin Development.

Educators from the Bitcoin SV Academy team will prescribe weekly resource and question packs to stimulate the students to develop a deeper consideration for what is involved in creating a scalable Bitcoin application. The students will attend fortnightly tutorials where their answers to the question pack will be evaluated and discussed in greater detail.

#### Live session #1

Hash Functions	<ul> <li>Hash Functions and Hash Tables</li> <li>Content Addressed Distributed Data Structures</li> </ul>
	Efficient Provable Data Possession for Hybrid Clouds

**Course pre-requisite:** Hash Functions (primitives)

Worksheet to complete prior to the live session: Week 1 – Hash Functions

#### Live session #2

LIVE SESSION NE	
Merkle Trees	GitHub MerkleDAG
	<ul> <li>ForkBase: Immutable, Tamper-evident Storage</li> </ul>
	<ul> <li>Substrate for Branchable Applications</li> </ul>
	<ul> <li>Merkle-CRDTs - MerkleDAGs meet CRDTs</li> </ul>
	<ul> <li>Merkle<sup>2</sup>: A Low Latency Transparency Log System</li> </ul>
Digital Signatures	Digital Signatures
	<ul> <li>Legitimating Technologies: Digital Signatures Case</li> </ul>
	Study.
	Segwit, Mixing and Law
	SigHash Flags

Course pre-requisite: Merkle Trees and Digital Signatures (Primitives)

Worksheet to complete prior to the live session: Week 2 Merkle Trees and Week 3 Digital Signatures.

## Live session #3

Data and Databases	<ul><li>What is DBaaS?</li></ul>
	<ul> <li>SQL vs NoSQL</li> </ul>
	<ul><li>What is Cloud Storage?</li></ul>
	<ul><li>What is Object Storage?</li></ul>
	Block vs File Storage
	<ul><li>What is a Load Balancer?</li></ul>
	<ul> <li>Kubernetes vs Docker</li> </ul>
API led Event-Driven &	API vs SDK
Microservices Architectures	<ul><li>What is API Management?</li></ul>
	<ul><li>What is a REST API?</li></ul>
	<ul><li>What is an API Gateway?</li></ul>
	<ul><li>What is Event Driven Architecture?</li></ul>
	<ul><li>What are Microservices?</li></ul>
	<ul> <li>Architecting a Cloud Native API Solution.</li> </ul>
	<ul> <li>Blockchain Enabled Trustless API Marketplace</li> </ul>
	<ul> <li>Unofficial API and Browser Extension Development</li> </ul>
	for Augmenting Student Resources

Course pre-requisite: Bitcoin Development Chapter 1

Worksheet to complete prior to the live session: Week 4 Data and Databases and API led

Event-Driven & Week 5 Microservices Architectures

## Live session #4

Debunking the Blockchain Trilemma, CAP Theorem & Application Scalability	<ul> <li>Myths of Decentralisation</li> <li>On Decentralisation</li> <li>The Wizard of Blockchain</li> <li>Cost Performance Trade-Off Evaluation in Microservices impacted by the CAP Theorem Limitations</li> </ul>
Working Blockchain & Overlay Networks	<ul> <li>A Survey and Comparison of P2P Overlay Network Schemes.</li> <li>Virtual Networking Explained</li> <li>What is a Content Delivery Network</li> <li>Mandala Network</li> <li>SPV</li> <li>Working Blockchain</li> </ul>

**Course pre-requisite:** Bitcoin Development Chapter 2&3

**Worksheet to complete prior to the live session:** Week 6 Debunking the Blockchain Trilemma, CAP Theorem & Week 7 Application Scalability and Working Blockchain & Overlay Networks.

#### Live session #5

Intro to Git and Github	<ul> <li>Git and GitHub for Beginners</li> <li>Getting Started With OpenSSH Key Management.</li> <li>Setting up an Nx monorepo with Angular</li> <li>Setting up CI/CD with Github Actions and Vercel</li> </ul>
Constructing Transactions & Script	<ul> <li>Introduction to Bitcoin Transactions</li> <li>MintBlue API, SDK and Integrations</li> </ul>

**Course pre-requisite:** Bitcoin Development Chapter 4-5

Worksheet to complete prior to the live session: Week 8 Intro to Git and Github and Week 9 Constructing Transactions and Bitcoin Script.

#### Live session #6

Metanet	Metanet Overlay
	<ul> <li>Dagda</li> </ul>
	<ul> <li>The Birth of Ontology &amp; the DAG</li> </ul>
	<ul> <li>Tutorial on directed Acyclic Graphs</li> </ul>
	A.N.N.E preview.
End of programme	Feedback on project completed by students
	Wrap up of the programme

Course pre-requisite: Bitcoin Development Chapter 6

Worksheet to complete prior to the live session: Week 10 Metanet

## **Blockchain Innovation Program**

## Worksheets

## Week 10: Metanet

## 1. The Birth of Ontology and the Directed Acyclic Graph

https://philpapers.org/archive/LANTBO-10.pdf

- a. In which direction of a DAG leads to increased specialisation of the information contained?
- b. In which direction of a DAG leads to increased generalisation of the information contained
- c. How does using a DAG for ontological purposes promote interoperability at the logical level
- d. What is meant by "constrains syntactic operations"?

## 2. Metanet and Overlay Networks: Building a Better Internet with Bitcoin

- a. Why would sharing a database for indexing information be advantageous?
- b. How can a single Write Once Read Many (WORM) database minimise fraud and enhance accountability?

## 3. Tutorial on directed acyclic graphs

https://www.sciencedirect.com/science/article/pii/S0895435621002407

- a. How can DAGs help to eliminate scientific errors like confounds and biases?
- b. How would adopting DAGs as the standard language for all research related to causation, mediation and interaction improve results?

### 4. A.N.N.E. - on BSV

- a. How might a protocol such as A.N.N.E be a substrate for the realisation of a Metanet / Metaverse?
- 5. Dagda- dagda.app
- a. What are the benefits of being able to update a node value in a DAG?
- b. What kind of data might dagda be useful for?
